

Plastic Pollution

K.L2U1.8; 1.G2.1; 2.G1.2

Teacher will discuss human affects on the environment and plastic pollution

Humans share the Earth with many living beings like plants and animals. We need to make sure that we share the Earth with the plants and animals and keep the Earth healthy. Recycling plastic items makes sure they can be reused to make something new. When plastic items like grocery bags and water bottles do not get recycled they can end up in near animals on land and in the ocean. This trash is called pollution. These animals can eat the plastic which makes them sick.

How can we make sure plastic does not end up in the environment? (allow students to come up with a list of ideas). Recycling plastic items can help make sure the plastic gets reused, but we can do better by not using so much plastic. We can buy reusable water bottles and shop with reusable bags so that we do not use so much plastic. Not using a plastic drinking straw is also a great way to help the Earth.

Plastic Pollution

K.L2U1.8; 1.G2.1; 2.G1.2

Sherry the dolphin is swimming through a polluted ocean. Help Sherry find her way by circling the fish and crossing out the trash.
